Claims

- 1. A cutting head (1) having one lower and one upper shearing blade (2, 3) for an electric hair cutting machine (4), characterized in that the lower and upper shearing blades (2, 3) are solidly joined to one another, and a cutting blade (5) with a cutting serration (6), made from a flat material (7) and drivable to oscillate, is located in a slit (31) between the lower and the upper shearing blade (2, 3).
- 2. The cutting head as defined by claim 1, characterized in that as the flat material (7), a hard metal sheet (7.1) is provided.
 - 3. The cutting head as defined by claim 1, characterized in that the cutting blade (5) has a thickness (S) of approximately 0.1 to 1.0 mm.
 - 4. The cutting head as defined by claim 1, characterized in that the cutting blade (5) is provided with a parallel guide (36).
- 5. The cutting head as defined by claim 1, characterized in that the cutting head (1) is provided with a hair cutting length adjuster (9).
 - 6. The cutting head as defined by claim 5, characterized in that the lower and upper shearing blades (2, 3) are embodied adjustably relative to the cutting blade (5).
 - 7. The cutting head as defined by claim 1, characterized in that a lubricant reservoir (8) is associated with the cutting head (1).
 - 8. The cutting head as defined by claim 1, characterized in that the hair cutting

machine (4) is operated with a battery or with a rechargeable battery (16).

- 9. The cutting head as defined by claim 1, characterized in that the cutting head (5) is embodied as a structural unit (34).
- 10. The cutting head as defined by claim 9, characterized in that the cutting head (5) is embodied as lockable to the hair cutting machine (4).
